

Technical Information

Rollersign Cassettes

The Rollersigns cassette converts typical post and webbing crowd control barriers into high-impact, high visibility marketing, promotional and advisory space in an efficient and flexible manner. Rollersigns can be raised and stored away when not required. Rollersigns can be mounted onto universally used existing posts. Rollersigns banners can be changed in moments utilising a unique fitting, affording flexibility in changing promotions without disruption and with ease.

Measuring

The Rollersigns cassette measures 1.5m across. Rollersigns banner provides a visible print area of 1495mm x 780mm. There is a gap of 160mm between banners to accommodate the posts and for multiple banners this should be accommodated within the artwork and text.

Materials

Rollersigns cassettes are made from durable aluminium. Rollersigns banners are available in a choice of either Mesh or Blockout vinyl. Stripmesh allows for 37% air-flow through making it ideal for outdoor use. Blockout material is ideal for double-sided printing. Banner materials are fire retardant to NFPA 701 Title 19 standard.

Operation

Rollersigns are operated by pulling down and fastening using either hooks either side which fit into custom design slot on the crowd control post, or using a fork system which fits against standard crowd control post. A sharp downward tug is required to tense the Rollersigns banner into the required position. Rollersigns can be stored upright by standing cassette against crowd control post and winding webbing around Rollersigns cassette and post and fix to post. Rollersigns own posts come with standard fixing slot on base.

Rollersigns Crowd Control Post Barriers

Rollersign posts are a 2 piece post which can be dismantled for ease of carrying and storing. All Rollersigns posts come ready slotted to allow fitting of the Rollersigns Cassette hook system.

Measuring

Rollersigns post base has a diameter of 345mm, the upright post has a diameter of 63mm. Each post contains a 50mm x 2300mm webbing cassette, available in a range of standard colours. The Rollersigns posts stand at a height of 990mm.

Materials

Rollersigns posts come in choice of powder coated aluminium or stainless steel. Rollersigns bases are made from durable cast iron.

Operation

The Rollersigns post base has a unique wing nut fitting which allows for the post to be either assembled or dismantled without requiring any additional tooling.
